

Yokebud.fi Website Development Documentation

This documentation provides an overview of the development, structure, features, and workflow of the Yokebud.fi website. The document is intended for project owners, developers, and future maintainers.

1. Project Overview

Yokebud.fi is an e-commerce and custom product platform focused on personalized engraved products, accessories, and handmade craft items. The website is designed to provide a modern shopping experience with product customization functionality.

2. Main Objectives

- Build a responsive and modern e-commerce platform.
 - Allow users to customize products visually.
 - Support secure product management.
 - Improve user experience across desktop and mobile devices.
 - Create a scalable platform for future business growth.
-

3. Frontend Development

The frontend is designed with a responsive UI/UX approach. Key features include:

- Responsive layouts for desktop, tablet, and mobile.
 - Product galleries and image sliders.
 - Dynamic product customization sections.
 - Interactive buttons, forms, and animations.
 - SEO-friendly page structure.
-

4. Backend Development

The backend manages product data, user requests, uploads, and order handling. Common backend responsibilities include:

- Product management system.
 - Category management.
 - Order processing.
 - File upload handling.
 - Database operations.
 - Authentication and admin control.
-

5. Database Structure

The database stores:

- Product information.
 - Customer orders.
 - Uploaded customization files.
 - Categories and inventory.
 - Admin data and configuration settings.
-

6. Admin Panel Features

The admin panel is designed to simplify website management. Features may include:

- Add/Edit/Delete products.
 - Upload product images.
 - Manage inventory and pricing.
 - View customer orders.
 - Control featured products and homepage content.
-

7. Product Customization System

The customization system allows customers to personalize products. Functionalities include:

- Text engraving.
 - Custom image uploads.
 - Live preview support.
 - Personalized order instructions.
 - Custom design positioning.
-

8. Performance & Optimization

Optimization techniques used or recommended:

- Image optimization.
 - Lazy loading.
 - Efficient API handling.
 - Mobile-first responsive design.
 - Caching and CDN support.
-

9. Security Considerations

Security practices include:

- Input validation.
- Secure authentication.

- File upload protection.
- Database query protection.
- Secure admin access.

10. Future Improvements

Planned or recommended future improvements:

- AI-based customization preview.
 - Multi-language support.
 - Advanced analytics dashboard.
 - Faster product rendering.
 - Improved payment integrations.
-

11. Conclusion

Yokebud.fi is designed as a scalable and customizable e-commerce platform. The website structure supports future feature expansion and business growth while maintaining a clean user experience.

Technology Stack Summary

Component	Technology
Frontend	React / HTML / CSS / JavaScript
Backend	Node.js / Express.js
Database	MySQL
